SUMMARY

Software QA Engineer / SDET with 5 years of experience in backend (API) and UI test automation, including 3 years testing FDA-regulated healthcare software for Roche (HL7). I build automation frameworks from scratch in C#/.NET and Playwright, run them in Azure DevOps CI/CD and keep full traceability from requirements to defects. At Solvo Global my framework of ~300 automated tests cut regression from ~4 hours of manual testing to under 30 minutes. Bioengineer with a postgraduate specialization in Software Testing.

TECHNICAL SKILLS

Languages	C#, .NET, TypeScript, Java, JavaScript, SQL, PowerShell
UI automation	Playwright, Selenium WebDriver, Appium · Page Object Model, Screenplay
API testing	REST & SOAP · RestSharp, RestAssured.Net, RestAssured (Java), Postman, SoapUI · JSON Schema
Frameworks / BDD	NUnit, SpecFlow, Reqnroll, Cucumber, JUnit, TestNG · BDD, TDD
CI/CD & tools	Azure DevOps Pipelines, GitHub Actions, Git, SonarQube, Allure, Qase, Jira
Domain & quality	Healthcare (FDA-regulated), HL7, FHIR · ISO/IEC 25010, WCAG 2.1 (axe-core), JMeter · Agile/Scrum

EXPERIENCE

Software QA Engineer / SDET — Dec 2024 – Present
Solvo Global · Remote

- Designed and built a hybrid API + UI automation framework from scratch (C#, .NET, NUnit, Playwright, RestSharp, RestAssured.Net) that now runs ~300 automated tests.
- Cut regression time from ~4 hours of manual testing to under 30 minutes; the API suite runs in about 4 minutes.
- Integrated the suites into Azure DevOps CI/CD with results published to Qase, keeping traceability from requirements to tests and defects.
- Own test planning (scope, objectives, strategy) and regression cycles; create testing PBIs aligned with sprint goals.
- Gather requirements directly with clients and project managers, and lead defect triage and troubleshooting with developers and QA engineers.

Test Automation Engineer — Sep 2021 – Dec 2024
Globant (client: Roche) · Medellín

- Automated backend and HL7 integration testing for FDA-regulated healthcare software at Roche, using C#, .NET and SpecFlow (BDD).
- Authored automation reports and test evidence for releases, and presented findings to management.
- Researched and selected cost-effective automation tools; defined test strategies tied to project milestones to show operational readiness.
- Decided where automation added value and where it was counterproductive, keeping the suite lean; contributed to code reviews.
- Joined through Globant's Test Automation Bootcamp (Selenium, Java, TestNG, Appium, RestAssured, Postman).

Front End Developer Trainee — Jan 2021 – Sep 2021
Acamica

- Built cross-browser, responsive features with HTML, CSS/SCSS and JavaScript.

PORTFOLIO PROJECTS

- **FHIR R4 API Automation** — BDD tests for the HL7 FHIR R4 standard (C#, Reqnroll, Firely SDK): versioning, referential integrity, OperationOutcome validation, LOINC/UCUM vital signs.
- **Playwright Hybrid Framework** — Playwright + TypeScript: data arranged and verified via API, behaviour tested via UI on 3 browsers, axe-core accessibility; found 2 product defects.
- **.NET API Automation Framework** — Reqnroll + RestSharp with JSON Schema, parallel isolated data, test plan, traceability matrix and 4 documented API defects.
- **Java Selenium Cucumber Framework** — Java 21, Selenium 4 and RestAssured with Cucumber, dependency injection and parallel runs.

All run in GitHub Actions with live reports, linked from juanvg1529.github.io, where the site itself is covered by 70+ Playwright tests.

EDUCATION

Specialization in Software Engineering (Software Testing) — Autonomous University of Manizales 2025
B.Eng. in Bioengineering — University of Antioquia 2021

COURSES

AWS Cloud and AI Practitioner (course) — Udemy, 2026
Executive Certificate in Company Direction — MTF Institute, 2026

LANGUAGES

Spanish (native) · English (advanced, C1) · French (intermediate)
